15 ABOUT US

Cameron Firth,
Director, Storeplan

We are here to **help** you **grow** and **leverage** your **business**

Through our experiences, we have designed a blueprint design concept tailored for the Electrical Wholsaler Industry, to help achieve the best storage solutions for your business.

We have been working alongside various groups, advising and collaborating with Managers to fit out an entirely new facility or improve efficiencies and storage capacity within a current facility.

With the right mix of best practices, you can maximise your operations for the long term.

The following pages detail various products that we recommend that benefit your warehouse and showroom areas, ensuring a productive and functional facility.

We are here to help create effective solutions for your business.

Planning your **Warehouse**

The intention for any warehouse is to ensure it is always running at a consistent and optimal level. Custom-designed storage system fit-outs benefit warehouse productivity by:

- Keeps inventory organised and accessible.
- Storing equipment appropriately and safely.
- Managing incoming & outgoing stock efficiently.
- Retain larger stock holdings, maximising ROI from your facility.
- Increases productivity from staff.

Product **Solutions**

- RECEIVING/PACKING AREA
- CONDUIT AND CABLE TRAY STORAGE SYSTEMS
- CABLE REEL STORAGE
- BULK ITEMS
- SOLAR PANEL STORAGE
- SHOWROOM

RECEIVING/ PACKING AREA

The key to this busy area is to ensure you keep it clear from clutter and have enough space to work with orders that are coming in and going out, minimising congestion. The main solutions for this area ensure your products are accessible and keep the areas functional:

■ Workbenches

Workbenches are available in both mobile & static units and have a selection of accessories to complement them. All benches come standard with an adjustable base shelf level.

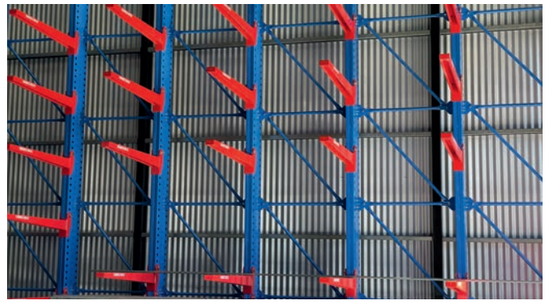

■ Longspan Shelving

Longspan Shelving is the most common shelving system used in the receiving/ packing area. It is available in a range of different sizes to accommodate all things goods inwards and goods outwards.

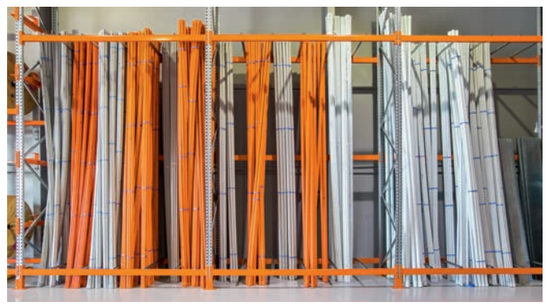

CONDUIT AND CABLE TRAY STORAGE SYSTEMS

■ Cantilever Racking

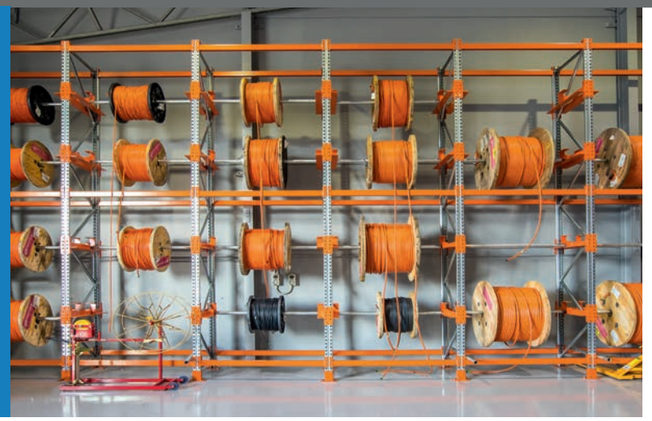

Cantilever Racking is engineered for the horizontal storage of extra-long, bulky or irregular shaped items.

■ Conduit Racking

Conduit Racking is constructed from selective pallet racking & is configured to form vertical bays within the rack. These racking systems are the perfect storage solution for storing conduit, solar rail and cable tray in either bulk packs/crates or individual lengths.

CABLE REEL STORAGE

■ Cable Racking

Cable racking systems are constructed from selective pallet racking components coupled with heavy duty, custom-designed bracket & pipe kits, which cater to a range of cable reel sizes and weights.

BULK STORAGE

The easiest way to make the most of your new or existing space is to implement storage solutions that occupy a good mix of ground and air space – (Air space is typically an under-utilised commodity.)

Bulk items such as air cons, lights and other palletised products can be challenging to store.

Available bulk storage solutions:

- Pallet Racking
- High Bay Shelving
- Mezzanine Floor Systems

■ Pallet Racking

Standard selective pallet racking is the 'Go To' system for the storage of palletised items. With a wide variety of sizes and capacities available, almost any product you can put on a pallet can be stored on pallet racking. Accessories such as timber shelves and mesh decks add to the functionality of this product.

■ High Bay Shelving

High Bay shelving is a great option to consider to maximise air space and create more handpicked product space. It can be installed in both warehouse & showroom areas. Typically an electric stock picker or platform ladder is used to gain access to the upper shelving levels. Customers can browse the aisles to access products on the lower levels.

■ Mezzanine Floor Systems

One of the most effective ways to significantly increase your storage space is to add a mezzanine level to your facility. Mezzanine floor systems will provide the following:

- The ability to increase stock holdings.
- Expands your existing footprint without the expense, time, and energy of moving to another location.
- Improves business output & performance by utilising as much available air space as possible, freeing up valuable ground floor area.
- A relocatable asset – take your mezzanine floor with you if you do decide to move.

SOLAR PANEL STORAGE

■ Drive-In Racking

Typically, solar pallets take up a lot of ground space and can only be stacked two high. Our unique Drive-In Racking System is designed to cater for varying sizes of solar pallets and allows you to take full advantage of your air space.

■ Customised Pallet Racking

A custom pallet racking system set up at a depth of approx. 1800-2000mm allows solar pallets to be stored lengthways.

Mesh decks or timber shelves on beams form the base structure to ensure pallets are adequately supported.

SHOWROOM

Storeplan has two leading solutions to store and display merchandise within your showroom area.

■ Gondola Shelving

Gondola shelving is an aesthetically pleasing storage and display shelving system tailored to your electrical showroom needs for a more retail feel.

Available in a wide range of sizes, configurations and even custom colour options to further enhance your brand.

■ Longspan Shelving

Longspan Shelving is the more ‘industrial look’ shelving system commonly used in showroom areas to store and display products.

OUR PROCESS

0.1.CONSULTATION & SITE VISIT

Our first step is to organise a free, no-obligation assessment of your site. Our due diligence process is to carry out a site survey, take measurements, notes and meet with you to understand your requirements and future business plans.

0.2 DESIGN STAGE

Our goal at Storeplan is to maximise space and productivity and capture your future business plans in our overall fit-out map. We will present you with numerous design options and go back & forth until you are happy with the proposed new fit-out plan.

0.3 PROPOSAL/SOLUTION DOCUMENT SENT

This stage is where we present you with a full proposal to complete your project, outlining the entire scope of works from start to finish in a clean and professional document.

0.4 INSTALLATION & PROJECT MANAGEMENT

After the agreed proposal, we will connect you with your Project Manager, your main point of contact during your project. They will communicate and provide essential information as required and ensure the smooth running of your project.

Your Project Manager will provide an install date and recommend the best procedures to minimise disruption and downtime within your facility.

All Storeplan installers & contractors are experienced and professional fitters.

0.5 AFTER CARE

We will contact you shortly after installation is complete to ensure you are satisfied with your project and ensure that all systems meet your requirements.

About Us

As experts for electrical storage systems, our single mission is to help our clients succeed by providing safe, cost-effective and innovative solutions that answer their storage needs and growth plans for their businesses.
